

FMCG ERP

Kenya Go-Live Training Manual

Version: 1.0

Date: 5 June 2026

Prepared for: Kenya Go-Live Training

Environment: FMCG ERP Production System

Screenshots captured from FMCG ERP development environment.
Screens may change as the ERP evolves. Always follow company SOPs and
manager instructions.

Confidential — Internal Use Only

Kenya Go-Live Training Index

Date: 2026-05-18

Version: 1.0

Project: FMCG ERP — Kenya Production Launch

How to Use This Manual Set

Each manual covers one role group. Staff should only need their own manual. The Admin manual covers system setup and applies to IT staff only.

All manuals reference screenshots from `../screenshots/captured/`. Screenshots are captured from the live ERP.

Role Manuals

#	Manual	Role Group	Status
01	Admin User Manual	IT Admin, System Administrator	Ready
02	Production User Manual	Production Supervisors, Operators	Ready
03	Warehouse & Inventory Manual	Storekeepers, Receiving Clerks	Ready
04	Procurement Manual	Purchasing Officers	Ready
05	Quality Control Manual	QC Technicians, QA Manager	Ready
06	Sales & Logistics Manual	Sales Reps, Invoicing, Logistics	Ready
07	HR Manual	HR Officer, Payroll Clerk	Ready
08	Manager Dashboard Manual	Department Heads, MD, Finance Director	Ready
09	Common Problems & FAQ	All Staff	Ready

Go-Live Readiness Checklist

Admin Tasks (Complete Before Go-Live)

- ☐ Company name, logo, timezone (Africa/Nairobi), currency (KES) configured
- ☐ All staff user accounts created
- ☐ Roles assigned (Production, Warehouse, Procurement, QC, Sales, HR, Finance)

- ☐ 2FA enabled for all admin accounts
- ☐ M-Pesa integration credentials configured
- ☐ SMTP configured for email notifications

Master Data Setup (Complete Before Go-Live)

- ☐ All active products loaded in Products workspace
- ☐ All raw materials loaded in Materials workspace
- ☐ All suppliers loaded in Suppliers workspace
- ☐ Warehouses and bin locations configured in WMS
- ☐ BOM/recipes for all active products
- ☐ Chart of accounts set up in Finance
- ☐ All employees created with payroll profiles
- ☐ Customer master data loaded

Opening Balances (Complete Before Go-Live)

- ☐ Opening stock counted and entered
- ☐ Opening bank balances entered in Finance
- ☐ Opening accounts receivable entered

Training Schedule (Recommended)

Day	Session	Audience	Duration
-14	System setup and admin config	IT Admin	Full day
-7	Production and BOM training	Production supervisors	Half day
-7	Warehouse and WMS training	Storekeepers	Half day
-5	Procurement and supplier training	Purchasing team	Half day
-5	Quality inspection setup	QC team	Half day
-3	HR and payroll setup	HR officer	Half day
-3	Sales order and invoicing	Sales team	Half day
-1	Dress rehearsal — full transaction run	All key users	Full day
Go-live	Live support at each workstation	IT + key users	Full day
+3	Debrief, FAQ, corrections	All	2 hours

Support During Go-Live

- First contact: System Administrator
 - ERP vendor support: [add contact]
 - Backup procedure: [add manual fallback process]
-

ERP Login

URL: `http://[server-ip]:3000` (replace with actual server IP or domain)

Default admin: `admin` / [password set by administrator]

Each staff member will have their own username provided by the admin.

Never share passwords. Never log in as another user.

Admin User Manual

Audience: IT Administrator, System Administrator

URL: `/dashboard/admin`

Permission required: `users.view` (admin role)

Your Role

As admin, you set up and maintain the ERP. You create user accounts, assign roles, configure the system, and troubleshoot issues. You are the first line of support for all other staff.

Pages You Use

Page	URL	What you do there
Dashboard	<code>/dashboard</code>	Overview
Admin workspace	<code>/dashboard/admin</code>	Manage all system settings
Approvals	<code>/dashboard/approvals</code>	Review pending approval requests
Documents	<code>/dashboard/documents</code>	Manage shared documents
Logs	<code>/dashboard/logs</code>	Audit trail
AI	<code>/dashboard/ai</code>	AI configuration
Integrations	<code>/dashboard/integrations</code>	M-Pesa, API keys

SA System Admin...
admin@erp.local

Before You Start — Security Checklist

Before going live, verify the following with IT/DevOps:

Item	Action required
Management user password changed	First login forces password change — confirm this completed
<code>SECRET_KEY</code> set in production	Must be a long random string — never the example value
<code>OTP_DEV_DELIVERY_MODE=false</code>	Confirm disabled in production (enables real OTP delivery)
eTIMS live mode	Do NOT enable until KRA provider is selected and credentials are ready
M-Pesa credentials	Use Safaricom production (not sandbox) credentials in live
<code>SEED_DEMO_DATA=false</code>	Confirm demo seed is OFF in production — demo data should not be in a live DB
GS1 auth gate	Confirm GS1 label page requires login (all 38 endpoints are auth-protected by default)
PyJWT <code>SECRET_KEY</code> rotated	If the default example key was ever used, rotate before go-live

Step 1: Initial System Setup

1.1 Configure Company Details

1. Go to `/dashboard/admin`
2. Click the **System Config** tab
3. Set:
 - Company Name: your company name
 - Timezone: `Africa/Nairobi`
 - Default Currency: `KES`
 - Country: `Kenya`
4. Upload logo (PNG, max 2MB)
5. Click **Save**

1.2 Configure Email (SMTP)

For order confirmations, OTP delivery, and notifications:

1. Admin → System Config → Email Settings
2. Enter SMTP host, port, username, password
3. Click **Send Test Email** to verify
4. Save

1.3 Configure M-Pesa Integration

1. Go to `/dashboard/integrations?tab=mpesa`
2. Enter M-Pesa Consumer Key, Consumer Secret, Shortcode, Passkey
3. Set environment to `production` (not sandbox)
4. Click **Test Connection**
5. Save

Step 2: Create User Accounts

2.1 Create a New User

1. Go to `/dashboard/admin?tab=users`
2. Click + **Invite User** (or + **Create User**)
3. Fill in:
 - Full Name
 - Email address (used for login and notifications)
 - Username (short, no spaces)
 - Temporary password (user must change on first login)
4. Assign Role (see section below)
5. Click **Create**

Administration
Users, roles, security, system configuration

Users
8 total [+ Add User](#)

Search name, email, username All Status

NAME	USERNAME	EMAIL	ROLES	TYPE	STATUS	
Chief Executive Officer	ceo	ceo@erp.com	ceo	User	Active	Details →
Marketing Manager	mkt_manager	mktmanager@erp.com	marketing_manager	User	Active	Details →
Chief Marketing Officer	cmo	cmo@erp.com	cmo	User	Active	Details →
System Administrator	admin	admin@erp.local	owner	Superuser	Active	Details →
Chief Technology Officer	cto	cto@erp.com	cto	User	Active	Details →

Chief Operating Officer	coo	coo@erp.com	coo	User	Active	Details →

2.2 Assign Roles

Roles control what each user can see and do.

Role	For
Admin	IT staff only — full access
Production	Factory floor supervisors and operators
Warehouse	Storekeepers, receiving staff
Procurement	Purchasing officers
Quality	QC technicians, lab staff
Sales	Sales reps, invoicing clerks
HR	HR officers, payroll clerks
Finance	Finance team, accountants
Manager	Read-only dashboard access + approvals

To assign: Admin → Roles tab → select role → add user to role members.

Administration
Users, roles, security, system configuration

Users **Roles** Permissions Companies Security Approvals Custom Fields System Config Mobile Apps System Logs Import History

Roles
35 total [+ Add Role](#)

All Status ▾

ROLE	DESCRIPTION	PERMISSIONS	STATUS
owner	Full system access — owner/executive	459 assigned	Active Manage
admin	User and role lifecycle management — plus destructive ERP data operations	103 assigned	Active Manage
ceo	Chief Executive Officer — full cross-functional oversight and import authority	98 assigned	Active Manage
coo	Chief Operating Officer — broad operational oversight	126 assigned	Active Manage
cfo	Chief Financial Officer — full financial and compliance oversight	66 assigned	Active Manage
cto	Chief Technology Officer — integrations, system config, AI, and full import authority	92 assigned	Active Manage
finance_manager	Full finance and M-Pesa access	20 assigned	Active Manage
scoped_hr_manager	HR manager with scoped department and payroll authority	5 assigned	Active Manage
read_only_auditor	Read-only auditor with assigned-scope visibility and optional export	17 assigned	Active Manage

2.3 Deactivate a User

1. Admin → Users tab → find user
2. Click the user → click **Deactivate**
3. User can no longer log in; their data is preserved

Step 3: Security Configuration

3.1 Password Policy

1. Admin → Security tab
2. Recommended settings:
 - Minimum length: 12
 - Require uppercase: Yes
 - Require digit: Yes
 - Require special character: Yes
3. Save

3.2 Two-Factor Authentication (2FA)

2FA adds a second login step using an OTP code.

To enable for all admin accounts:

1. Admin → Security → 2FA Settings
2. Set **Require 2FA for Admin role**: Yes
3. Users will be prompted to set up 2FA on next login

Supported methods: Email OTP, SMS OTP, or Authenticator app (TOTP).

3.3 Session Management

Admin → Security → Session Settings:

- Session timeout: 8 hours (recommended)
- Max concurrent sessions: 1 per user (recommended for security)

Step 4: Manage Roles and Permissions

1. Go to `/dashboard/admin?tab=roles`
2. Each role has a set of permissions
3. Click a role → **Edit Permissions**
4. Check/uncheck permission boxes
5. Save

Do not remove permissions from a role while users are logged in — they will see permission errors until they re-login.

Permission Matrix
459 permissions · 35 roles

Registry Coverage
Backend registry permissions compared with database permissions. In sync

Registry	Database	Covered	Missing
176	459	176	0

MISSING REGISTRY PERMISSIONS
None

DATABASE-ONLY PERMISSIONS

- ad_performance.edit, ad_performance.view, ai_optimizer.approve, ai_optimizer.run, ai_optimizer.view, analytics.export, analytics.view, attribution.view, audit.export, audit.view, auditor.export, bank_reconciliation.manage_own_scope, bom.ai_all, bom.approve_all, bom.archive_all, bom.cost_all, bom.create_all, bom.delete_all

USERS 7 permissions

Role	Create	Delete	Edit	Import	Import Template	Manage	View
owner	✓	✓	✓	✓	✓	✓	✓
admin	✓	✗	✓	✓	✓	✗	✓
ceo	✗	✗	✗	✓	✓	✗	✗
coo	✗	✗	✗	✓	✓	✗	✗
cfo	✗	✗	✗	✓	✓	✗	✗

Step 5: Approval Workflows

- Go to `/dashboard/admin?tab=approvals`
- Create approval rules for:
 - Purchase orders above KES [threshold]
 - Sales discounts above [%]
 - Expense claims above KES [threshold]
- Assign approvers by role
- Save

Users will receive notifications when their records require approval.

Step 6: Monitor System Health

Audit Logs

Every user action (login, create, edit, delete, approve) is recorded.

- Go to `/dashboard/admin?tab=logs` or `/dashboard/logs`
- Filter by user, action type, date

3. Export to CSV for compliance audits

System Config Tab

Shows:

- Database connection status
- Current Alembic migration revision
- Active user count
- Background job status

Common Admin Tasks

Task	How
Reset a user's password	Admin → Users → user → Reset Password
Unlock a locked account	Admin → Users → user → Unlock Account
Add a new module permission	Admin → Roles → role → Edit Permissions
View who approved a PO	Procurement → PO → History tab
Check email delivery failure	Admin → System Config → Email Logs

Troubleshooting

Problem: User cannot log in — "Account inactive" **Solution:** Admin → Users → find user → Activate Account

Problem: User sees "Permission denied" **Solution:** Check the user's role → ensure correct permissions are assigned; check that `knowledge_base.*` and `esign.*` permissions are assigned for users who need Documents module access

Problem: Emails not being sent **Solution:** Admin → System Config → Email Settings → Send Test Email → check SMTP logs; confirm `OTP_DEV_DELIVERY_MODE=false` in production

Problem: M-Pesa payments not reconciling **Solution:** Integrations → M-Pesa → check API logs; verify credentials are for production not sandbox

Problem: Knowledge Base or E-Sign shows "Access denied" **Solution:** The user lacks `knowledge_base.view` or `esign.view` permission — assign via Admin → Roles → Edit Permissions

Problem: eTIMS submissions stay in PENDING / never get accepted **Solution:** In simulation mode this is expected — SimulationETIMSCollector returns ACCEPTED immediately. If stuck in PENDING, check provider health panel. Live provider requires KRA credentials — do not enable without authorization.

Problem: GS1 label page shows login prompt unexpectedly **Solution:** This is correct behaviour — all GS1 endpoints require authentication (TASK-006). Ensure the user is logged in with a valid session before accessing `/dashboard/compliance/gsl`.

Problem: Database migration fails at startup with "lock not acquired" **Solution:** Another replica holds the `pg_advisory_lock(20260517)`. Wait for it to release (migration in progress on another container). If it persists after 5 minutes, check if a prior deployment crashed mid-migration — may need manual lock release: `SELECT pg_advisory_unlock(20260517);` on the database.

Training Checklist

- ☐ Can log in to admin account
- ☐ Has configured company name, timezone, currency
- ☐ Has created at least 3 staff accounts
- ☐ Has assigned correct roles to all staff
- ☐ Has enabled 2FA for admin accounts
- ☐ Has configured SMTP and sent a test email
- ☐ Has configured M-Pesa integration
- ☐ Can view audit logs and filter by user
- ☐ Has set up approval workflows for POs and expenses
- ☐ Knows how to reset a user's password

Production User Manual

Audience: Production Supervisors, Production Operators, Shift Leaders

URLs: `/dashboard/production`, `/dashboard/shop-floor`, `/dashboard/bom`

Permission required: `production.view`, `production.create`

Your Role

You plan and execute manufacturing. You create production orders, record output, report material usage, log downtime, and track batch numbers.

Pages You Use

Page	URL	What you do there
Production workspace	<code>/dashboard/production</code>	All production activities
Shop Floor terminal	<code>/dashboard/shop-floor</code>	Operator job card confirm/reject
BOM & Formula	<code>/dashboard/bom</code>	View/maintain bill of materials
Recipes	<code>/dashboard/recipes</code>	Product formulas
Planning	<code>/dashboard/planning</code>	MRP and production schedule
Maintenance	<code>/dashboard/maintenance</code>	Machine breakdown logging

Screenshot

Daily Production Workflow

Morning:

1. Check production plans for today → Production → Plans tab
2. Confirm material availability → Check with warehouse
3. Release production orders → Production → Orders tab → Release

During production:

4. Operators confirm on Shop Floor terminal
5. Record any downtime events → Production → Downtime tab
6. Record waste and yield → Production → Waste & Yield tab

End of shift:

7. Confirm production output → Production → Execution tab → Confirm
8. Record materials consumed → Production → Material Flow tab
9. Assign batch/lot numbers → Production → Batch & Lots tab
10. Submit QC check results → Production → Quality Control tab

Create a Production Order

1. Go to `/dashboard/production?tab=orders`
2. Click **+ New Order**
3. Fill in:
 - **Product**: select the finished good
 - **Quantity**: planned output quantity
 - **Unit**: KG, Litres, Units, etc.
 - **Planned Date**: when production should happen
 - **BOM Version**: select the correct recipe/formula version
 - **Work Center**: machine or production line
4. Click **Save as Draft**
5. Review the material requirements (auto-calculated from BOM)
6. Click **Release** when ready to start

Status flow: Draft → Released → In Progress → Completed

Confirm Production Output (Execution)

1. Go to `/dashboard/production?tab=execution`
2. Find the active production order
3. Enter:

- Actual quantity produced
- Actual time taken
- Any quality notes

4. Click **Confirm Output**

Or use the Shop Floor terminal (tablet/touchscreen):

1. Go to `/dashboard/shop-floor?tab=terminal`
2. Select your job card
3. Click **Start** when beginning
4. Click **Complete** when done
5. Enter actual quantity

Record Material Consumption

1. Go to `/dashboard/production?tab=material-flow`
2. Select the production order
3. Each BOM component shows planned vs actual quantity
4. Enter actual quantities used
5. Click **Post Materials**

If a material substitution was needed, enter the alternate material and quantity.

Record Downtime

1. Go to `/dashboard/production?tab=downtime`
2. Click + **Log Downtime**
3. Fill in:
 - Machine / Work Center
 - Start time / End time
 - Downtime reason (select from list or enter free text)
4. Click **Save**

Common downtime reasons: breakdown, changeover, cleaning, waiting for materials, utility failure.

Assign Batch / Lot Numbers

1. Go to `/dashboard/production?tab=batch-lots`
2. Select the completed production order
3. Click **Assign Batch Number**
4. System generates a batch number (or enter manually)
5. Enter: manufacture date, best-before date
6. Click **Confirm**

Batch numbers link production to quality inspections and traceability.

View BOM (Bill of Materials)

1. Go to `/dashboard/bom`
2. Search for the product
3. Select the active BOM version
4. View all components, quantities per batch, units

To check if a substitute is allowed:

- BOM → Substitutes tab → find the component

Production Planning (MRP)

1. Go to `/dashboard/planning?tab=mrp`
2. Click **Run MRP**
3. Review suggested production orders
4. Accept or reject each suggestion
5. Accepted suggestions become draft production orders

OEE Dashboard (Supervisors)

1. Go to `/dashboard/production?tab=oee`

2. View Overall Equipment Effectiveness for each line
3. Target: OEE > 85%
4. Drilldown: Availability, Performance, Quality breakdown

Common Mistakes

Mistake	How to Avoid
Creating order without checking stock	Always check materials tab before releasing
Forgetting to post materials	Set a end-of-shift reminder; materials tab shows "unposted" warning
Wrong BOM version	Always check BOM version date matches today's recipe
Not logging downtime	Log within 15 minutes; reasons are needed for OEE accuracy

Troubleshooting

Problem: Cannot release production order — "Insufficient stock"

Solution: Check inventory for the material → raise purchase request or production order for intermediate

Problem: BOM shows wrong components

Solution: Check BOM version effective date → contact admin or NPD team to update

Problem: Shop Floor terminal says "No active orders"

Solution: Supervisor must release the production order first from the Production → Orders tab

Training Checklist

- ☐ Can create a production order from BOM
- ☐ Can release a production order
- ☐ Can confirm output in Execution tab
- ☐ Can post material consumption in Material Flow tab
- ☐ Can log a downtime event with reason code
- ☐ Can assign a batch number to finished goods
- ☐ Can view OEE for their production line
- ☐ Can use the Shop Floor terminal to confirm a job card

Warehouse & Inventory User Manual

Audience: Storekeepers, Receiving Clerks, WMS Operators

URLs: `/dashboard/inventory`, `/dashboard/warehouses`, `/dashboard/wms`

Permission required: `inventory.view`, `inventory.create`

Your Role

You receive and dispatch goods, maintain accurate stock records, count stock, and manage warehouse locations. Accurate inventory is critical for production planning and sales order fulfilment.

Pages You Use

Page	URL	What you do there
Inventory workspace	<code>/dashboard/inventory</code>	Stock levels and movements
Warehouses & WMS	<code>/dashboard/warehouses</code>	Warehouse setup, bin locations
WMS workspace	<code>/dashboard/wms</code>	Picking, putaway, quarantine
Materials	<code>/dashboard/materials</code>	Raw material master
Products	<code>/dashboard/products</code>	Finished goods master

Screenshot

The screenshot shows the POVU ERP Enterprise Suite interface. The left sidebar contains a navigation menu with options like Dashboard, Supply Chain, Products, Materials, Suppliers, Inventory (selected), Warehouses & WMS, Procurement, Manufacturing, Commercial, Finance, Factory Operations, Logistics, HR & Payroll, Documents & Comm..., Intelligence, Administration, and Help Center. The main content area is titled 'Inventory' and includes a subtitle 'Stock ledger, movements, cycle counts, shelf life, traceability'. Below this are tabs for Stock Ledger, Movements, Cycle Count, Shelf Life, Traceability, Serials, and Valuation. The 'Stock Ledger' tab is active, showing '5 stock positions'. There are buttons for 'Import CSV' and 'Refresh'. Below these are tabs for 'Current Stock' (selected), 'Stock Entry (IN)', 'Stock Issue (OUT)', and 'Transfer'. A table displays the following data:

SKU	PRODUCT	WAREHOUSE	LOT	EXPIRY	ON HAND	AVAILABLE	RESERVED	ACTIONS
POVU-LD-1L	POVU Liquid Detergent 1L	FG-WH — Finished Goods Warehouse	no lot	—	4,500	4,500	0	Adjust Delete
POVU-FS-500ML	POVU Fabric Softener 500ml	FG-WH — Finished Goods Warehouse	no lot	—	2,800	2,800	0	Adjust Delete
POVU-DW-500ML	POVU Dishwashing Liquid 500ml	FG-WH — Finished Goods Warehouse	no lot	—	3,600	3,600	0	Adjust Delete
POVU-SC-750ML	POVU Surface Cleaner 750ml	FG-WH — Finished Goods Warehouse	no lot	—	2,300	2,300	0	Adjust Delete
POVU-HS-200ML	POVU Hand Sanitizer 200ml	FG-WH — Finished Goods Warehouse	no lot	—	7,500	7,500	0	Adjust Delete

The bottom of the screen shows a user profile for 'SA System Admin...' and a help icon.

Daily Warehouse Workflow

Receiving (morning):

1. Check purchase deliveries expected today → Procurement → Deliveries tab
2. Receive goods against the PO → Procurement → Deliveries → Receive
3. Put away to correct bin location → WMS → Locations

During the day:

4. Issue materials to production → Production will request via Material Fl
5. Dispatch finished goods for sales → Sales → Shipments tab

End of day:

6. Review stock movements → Inventory → Movements tab
7. Check items expiring soon → Inventory → Shelf Life tab
8. Update cycle count if scheduled → Inventory → Cycle Count tab

Check Current Stock Levels

1. Go to `/dashboard/inventory?tab=stock`
2. View stock by product/material and warehouse location

3. Use search/filter to find specific items

4. Columns: SKU, Description, On Hand, Reserved, Available, Location, Unit

The screenshot shows the 'Inventory' section of the POVU ERP system. The left sidebar contains a navigation menu with options like Dashboard, Supply Chain, Products, Materials, Suppliers, Inventory (selected), Warehouses & WMS, Procurement, Manufacturing, Commercial, Finance, Factory Operations, Logistics, HR & Payroll, Documents & Comm..., Intelligence, Administration, and Help Center. The main content area is titled 'Inventory' and includes a subtitle 'Stock ledger, movements, cycle counts, shelf life, traceability'. Below this are tabs for 'Stock Ledger' (selected), 'Movements', 'Cycle Count', 'Shelf Life', 'Traceability', 'Serials', and 'Valuation'. There are buttons for 'Import CSV' and 'Refresh'. A sub-header shows '5 stock positions' and tabs for 'Current Stock' (selected), 'Stock Entry (IN)', 'Stock Issue (OUT)', and 'Transfer'. The main table lists inventory items with columns: SKU, PRODUCT, WAREHOUSE, LOT, EXPIRY, ON HAND, AVAILABLE, RESERVED, and ACTIONS. The data rows show five items, all in the 'FG-WH — Finished Goods Warehouse'.

SKU	PRODUCT	WAREHOUSE	LOT	EXPIRY	ON HAND	AVAILABLE	RESERVED	ACTIONS
POVU-LD-1L	POVU Liquid Detergent 1L	FG-WH — Finished Goods Warehouse	no lot	—	4,500	4,500	0	Adjust Delete
POVU-FS-500ML	POVU Fabric Softener 500ml	FG-WH — Finished Goods Warehouse	no lot	—	2,800	2,800	0	Adjust Delete
POVU-DW-500ML	POVU Dishwashing Liquid 500ml	FG-WH — Finished Goods Warehouse	no lot	—	3,600	3,600	0	Adjust Delete
POVU-SC-750ML	POVU Surface Cleaner 750ml	FG-WH — Finished Goods Warehouse	no lot	—	2,300	2,300	0	Adjust Delete
POVU-HS-200ML	POVU Hand Sanitizer 200ml	FG-WH — Finished Goods Warehouse	no lot	—	7,500	7,500	0	Adjust Delete

Available = On Hand minus Reserved

Stock is reserved when a production order or sales order has been released.

Receive Goods (Goods Receipt Note)

When a delivery arrives:

1. Go to `/dashboard/procurement?tab=deliveries`
2. Find the relevant purchase order
3. Click **Receive Delivery**
4. Enter:
 - Actual quantity received (may differ from PO)
 - Lot/batch number (from supplier label)
 - Expiry date (for perishables)
 - Condition: OK / Damaged / Rejected
5. Click **Confirm Receipt**
6. Stock is automatically added to inventory

If goods are rejected or quarantined:

- Select condition **Quarantine**
- Goods go to WMS → Quarantine tab
- Notify QC to inspect

The screenshot displays the POJU ERP Enterprise Suite interface. The left sidebar contains a navigation menu with categories like Dashboard, Supply Chain, Products, Materials, Suppliers, Inventory, Warehouses & WMS, Procurement, Manufacturing, Commercial, Finance, Factory Operations, Logistics, HR & Payroll, Documents & Comm..., Intelligence, and Administration. The main content area is titled 'Procurement' and includes a sub-header 'Purchase requests, orders, RFQ, suppliers, subcontracting'. Below this is a horizontal tab bar with options: Purchase Requests, Purchase Orders, RFQ, Deliveries (selected), Suppliers, Blanket Agreements, Reorder Policies, Suggestions, and Subcontracting. The 'Deliveries' tab is active, showing 'Delivery Planning' with the subtitle 'Inbound schedule, overdue POs, and shortage alerts'. Three summary cards are displayed: 'Overdue POs' with a value of 0, 'Expected (next 30d)' with a value of 0, and 'Without Shipment' with a value of 0. Below these is an 'Inbound Schedule' section with a 'Days ahead' filter set to 30. A table with columns PO NO, SUPPLIER, EXPECTED DELIVERY, STATUS, SHIPMENT, and VALUE is shown, but it contains no data, with a message 'No active POs due within this period.' at the bottom.

Put Away to Bin Location (WMS)

After receiving:

1. Go to `/dashboard/wms?tab=locations`
2. Find the received material
3. Click **Put Away**
4. Scan or select the bin location
5. Confirm

Issue Stock to Production

Production will request materials automatically via the production order.

If manual issuance needed:

1. Go to `/dashboard/inventory?tab=movements`
2. Click **+ Manual Issue**
3. Select: Material, Quantity, Destination (Work Center / Production Order)
4. Click **Post**

Record a Stock Movement (Transfer)

Move stock between locations or warehouses:

1. Inventory → Movements tab
2. Click **+ Transfer**
3. From: source location
4. To: destination location
5. Quantity and unit
6. Click **Post Transfer**

Shelf Life and FEFO (First Expired, First Out)

1. Go to `/dashboard/inventory?tab=shelf-life`
2. Items are sorted by nearest expiry date
3. Items expiring within 30 days are highlighted in orange
4. Items expired are highlighted in red
5. Always pick the earliest expiry batch first (FEFO)

Important for Kenya food production: Expiry tracking is required for regulatory compliance. Never issue an expired batch to production.

Cycle Count (Physical Stock Count)

1. Go to `/dashboard/inventory?tab=cycle-count`
2. Click + **New Count**
3. Select warehouse and item range
4. Print the count sheet (or use mobile/tablet)
5. Count physically and enter the actual quantities
6. Click **Post Count**
7. System calculates variance (actual vs system quantity)
8. Supervisor approves the count; inventory is adjusted

Traceability

Track a batch forward (where did it go?) or backward (where did it come from?):

1. Inventory → Traceability tab
2. Enter batch/lot number or product
3. View full genealogy: supplier batch → production → finished goods → sales order

Quarantine Management

Items placed in quarantine (damaged delivery, failed QC):

1. WMS → Quarantine tab
2. View all quarantined items
3. After QC inspection:
 - **Release:** moves stock back to normal
 - **Reject/Dispose:** writes off the stock (requires manager approval)

Common Mistakes

Mistake	How to Avoid
Receiving without checking PO	Always find the PO before clicking Receive
Not entering expiry date	Required for all perishable materials — check supplier label
Wrong bin location	Confirm with WMS map before putting away
Issuing stock without production order	Never issue manually unless production supervisor has approved

Troubleshooting

Problem: Stock shows negative

Solution: A movement was posted against insufficient stock. Check Movements tab for the erroneous entry. Contact admin to reverse if needed.

Problem: Cannot find a PO in Deliveries tab

Solution: Confirm with procurement that PO has been released/approved. Only released POs appear in Deliveries.

Problem: Batch not found in system

Solution: Goods may not have been received yet. Check with procurement.

Training Checklist

- ☐ Can view stock levels and available stock
- ☐ Can receive goods against a purchase order
- ☐ Can put away to the correct bin location
- ☐ Can post a stock transfer between locations
- ☐ Can run and post a cycle count
- ☐ Understands FEFO and can pick the earliest expiry batch
- ☐ Can view and manage quarantined items
- ☐ Can trace a batch number forward and backward

Procurement User Manual

Audience: Purchasing Officers, Procurement Manager

URL: `/dashboard/procurement`

Permission required: `procurement.view`, `procurement.create`

Your Role

You source materials, raise purchase orders, manage suppliers, and oversee goods receipt. You ensure production never runs out of raw materials.

Pages You Use

Page	URL	What you do there
Procurement workspace	<code>/dashboard/procurement</code>	All procurement activities
Suppliers workspace	<code>/dashboard/suppliers</code>	Supplier master data

Screenshot

Procurement Workflow

1. Receive purchase request from production/warehouse
2. Identify supplier and get price
3. Raise Request for Quotation (RFQ) if needed
4. Create Purchase Order
5. Send PO to supplier
6. Receive goods confirmation from warehouse
7. Match invoice to GRN
8. Approve payment

Create a Purchase Request

When production or warehouse needs materials:

1. Go to `/dashboard/procurement?tab=purchase-requests`
2. Click + **New Request**
3. Fill in:
 - Material/Product
 - Quantity required
 - Required by date
 - Justification
4. Click **Submit for Approval**

Or production/warehouse staff can submit requests themselves — they appear in your queue.

Create a Purchase Order

1. Go to `/dashboard/procurement?tab=orders`
2. Click **+ New PO**
3. Fill in:
 - Supplier (select from list)
 - Delivery warehouse
 - Expected delivery date
4. Add line items:
 - Material/product
 - Quantity
 - Unit price (KES)
 - VAT type
5. Click **Save**
6. Click **Send to Supplier** (or print and email manually)

Status flow: Draft → Confirmed → Sent → Partially Received → Fully Received → Invoiced

Supplier Management

1. Go to `/dashboard/suppliers`
2. **Create supplier:**
 - Click **+ New Supplier**
 - Name, KRA PIN, payment terms, delivery lead time
 - Contact person, phone, email
 - Bank account for payment
3. **Rate supplier:** after each delivery, rate quality, timeliness, documentation

Request for Quotation (RFQ)

For large purchases or new items:

1. Procurement → RFQ tab
2. Click **+ New RFQ**
3. Add materials and quantities
4. Add suppliers to send RFQ to
5. Click **Send RFQ**
6. Suppliers respond; compare quotes in system
7. Select winning supplier → **Convert to PO**

Goods Receipt Confirmation

When warehouse receives goods against your PO:

1. Procurement → Deliveries tab
2. Open the delivery note
3. Review: actual quantity vs ordered quantity
4. Click **Approve Receipt** if correct
5. System posts stock to inventory

If short delivery: partial receipt is posted; remaining balance shows as open.

If damaged goods: warehouse will mark as quarantine; QC inspects.

AI Procurement Suggestions

The system suggests what to order based on stock levels and production plans:

1. Procurement → AI Suggestions tab
2. Review suggested items, quantities, and recommended suppliers
3. Click **Accept** to create a draft PO
4. Review and confirm the PO

Landed Cost (Import Orders)

For imported materials (add duties, freight, insurance to unit cost):

1. Procurement → Landed Cost tab
2. Select the PO
3. Add costs: freight, insurance, customs duty, port charges
4. Allocate to lines by weight, quantity, or value
5. System recalculates unit cost and posts to inventory valuation

Common Mistakes

Mistake	How to Avoid
Ordering from wrong supplier	Check preferred supplier in supplier master
Wrong unit (KG vs litres)	Verify unit with materials master before PO
Not matching invoice to GRN	Always match before approving payment
PO not sent to supplier	Check status = "Sent" before assuming supplier has it

Troubleshooting

Problem: Supplier not in system

Solution: Create supplier first in Suppliers workspace → then link to PO

Problem: PO approval required but approver not responding

Solution: Escalate to manager; check approval workflow in Admin → Approvals

Problem: Goods received but stock not updated

Solution: Warehouse must confirm delivery in Deliveries tab

Training Checklist

- ☐ Can create a purchase request
- ☐ Can create a purchase order with correct pricing
- ☐ Can send PO to supplier
- ☐ Can confirm goods receipt
- ☐ Can create and send an RFQ
- ☐ Can compare RFQ responses and convert to PO
- ☐ Can view AI procurement suggestions
- ☐ Can add landed cost to imported goods
- ☐ Knows supplier rating workflow

Quality Control User Manual

Audience: QC Technicians, Lab Analysts, QA Manager

URL: `/dashboard/quality`

Permission required: `quality.view`, `quality.create`

Your Role

You inspect incoming materials, in-process production, and finished goods. You manage HACCP documentation, handle consumer complaints, and maintain allergen records. Food safety compliance depends on your work.

Pages You Use

Page	URL	What you do there
Quality workspace	<code>/dashboard/quality</code>	All QC activities
Compliance workspace	<code>/dashboard/compliance</code>	GS1 labels, regulatory certs
Production (QC tab)	<code>/dashboard/production?tab=quality-control</code>	In-line QC during production

Screenshot

Quality Inspection Workflow

Incoming materials:

1. Procurement delivers → QC receives inspection task
2. Inspect against parameters
3. Pass → materials released to warehouse
4. Fail → quarantine + corrective action

In-process (during production):

5. Operator logs in-line checks via Shop Floor terminal
6. QC technician does spot checks at defined intervals
7. Results recorded in Production → Quality Control tab

Finished goods:

8. Sample from each production batch
9. Lab tests against product specification
10. Pass → batch released for despatch
11. Fail → batch quarantined → root cause investigation

Record an Inspection

1. Go to `/dashboard/quality?tab=inspections`
2. Click + **New Inspection**
3. Select:
 - Inspection type: Incoming / In-process / Finished goods
 - Product or material
 - Batch/lot number
 - Linked PO or production order
4. For each parameter, enter the test result
5. System shows Pass/Fail per parameter based on spec limits
6. Overall: **PASS** or **FAIL**
7. If FAIL: mandatory **Corrective Action** field
8. Click **Submit**

Quality Parameters

Define what gets tested and the acceptable limits:

1. Quality → Parameters tab
2. Click + **Add Parameter**
3. Fields: parameter name, test method, unit, min, max, target

4. Assign to product or product group

5. Save

Examples:

- pH: 4.5 – 6.5
- Moisture %: < 12%
- Microbial count: < 100 CFU/g
- Temperature at receipt: 0–4°C

Certificates of Analysis (CoA)

For each released batch:

1. Quality → Certificates tab
2. Click **Generate CoA** for the passed batch
3. System populates all test results from the inspection record
4. Review and sign off (digital signature)
5. Send to customer if requested

QMS — HACCP and CAPA

1. Go to `/dashboard/quality?tab=qms`
2. HACCP plans: critical control points, monitoring procedures, limits
3. Non-conformance reports (NCR): log any deviation
4. CAPA: Corrective and Preventive Action records
5. Document control: SOPs, work instructions

Allergen Matrix

Kenya food producers must declare allergens on labels:

1. Quality → Allergen tab
2. Each product shows allergen presence: Contains / May Contain / Free From
3. Cross-contamination risks from shared equipment are flagged
4. Update whenever a formula changes

Critical for regulatory compliance: Incorrect allergen declaration can trigger recalls and regulatory action.

Consumer Complaints

1. Quality → Consumer Complaints tab
2. Click + **Log Complaint**
3. Fill in: date, customer, product, batch number, complaint description
4. Assign to QA team member
5. Root cause investigation + CAPA
6. Close complaint when resolved
7. Batch link enables traceability checks

Regulatory Certificates

1. Compliance → Regulatory Certs tab
2. Upload certificates (KEBS, KRA, import permits, halal, kosher)
3. Set expiry date
4. System alerts 60 days before expiry
5. Renew and upload new certificate

GS1 Barcode Labels

1. Compliance → GS1 tab
 2. Select product
 3. System generates GS1-128 barcode with GTIN, lot, expiry date
 4. Print via connected label printer
 5. Barcode scannable at retail and for traceability
-

Common Mistakes

Mistake	How to Avoid
Releasing batch before all tests complete	All mandatory parameters must be entered before status can be set to PASS
Wrong batch number on inspection	Copy batch number directly from physical label
Not logging consumer complaint	Every complaint must be logged for regulatory audit trail
Expired certificate still in system	Set expiry dates on all certificates; review alert dashboard weekly

Troubleshooting

Problem: Cannot find the batch in inspection form

Solution: Batch must be created in production first (Production → Batch & Lots tab)

Problem: Inspection shows FAIL but product looks fine

Solution: Check parameter limits — they may need updating. Contact QA manager.

Problem: CoA not generating

Solution: All test results must be entered and inspection status must be PASS

Training Checklist

- ☐ Can create and submit an incoming goods inspection
- ☐ Can create in-process and finished goods inspections
- ☐ Can enter test results against parameters
- ☐ Can generate a Certificate of Analysis
- ☐ Can update the allergen matrix for a product
- ☐ Can log a consumer complaint
- ☐ Can generate a GS1 barcode label
- ☐ Can view HACCP CCPs and SOPs in QMS

- ☐ Knows how to raise a CAPA

Sales & Logistics User Manual

Audience: Sales Representatives, Invoicing Clerks, Van Sales Drivers, Logistics Coordinator

URLs: `/dashboard/sales`, `/dashboard/logistics`

Permission required: `sales.view`, `sales.create`

Your Role

You manage customer orders, raise invoices, coordinate deliveries, and settle van sales. Revenue and collections depend on your accuracy.

Pages You Use

Page	URL	What you do there
Sales workspace	<code>/dashboard/sales</code>	All sales activities
Logistics workspace	<code>/dashboard/logistics</code>	Fleet, shipments, containers
CRM workspace	<code>/dashboard/crm</code>	Customer relationships

SA System Admin...
admin@erp.local

Sales Order Workflow

1. Receive customer order (phone, portal, field rep)
2. Create sales order in system
3. Check credit limit and pricing
4. Confirm order (triggers warehouse pick)
5. Dispatch → delivery note generated
6. Invoice raised
7. Customer pays (M-Pesa, bank, cash)
8. Payment reconciled → order closed

Create a Sales Order

1. Go to `/dashboard/sales?tab=orders`
2. Click + **New Order**
3. Fill in:
 - Customer (select from list or search by name/code)
 - Delivery address
 - Order date
 - Required delivery date
4. Add line items:
 - Product
 - Quantity
 - Price (auto-fills from price list; edit if special)
 - Discount % (if authorised — may require approval)
5. Check total and VAT
6. Click **Confirm Order**

Customer Master

Add a new customer:

1. Sales → Customers tab
2. Click + **New Customer**
3. Fill in:
 - Name
 - KRA PIN (required for eTIMS invoice)
 - Contact name, phone, email
 - Delivery address
 - Credit limit (KES)
 - Payment terms (e.g., Net 30)
 - Price list (assign appropriate tier)
4. Save

Raise an Invoice

After goods are dispatched:

1. Sales → Invoices tab
2. Find the sales order
3. Click **Generate Invoice**
4. Check: items, prices, VAT, customer KRA PIN
5. Click **Post Invoice**
6. Download PDF or send by email
7. System sends to eTIMS (KRA) for e-invoicing compliance

Van Sales Workflow

Pre-selling (morning):

1. Sales → Van Sales tab
2. Create a **Van Load**:
 - Select vehicle/driver
 - Add products and quantities to load
3. Print the loading order
4. Warehouse loads the van

Selling route: 5. Driver visits customers 6. On return: Sales → Van Sales → Settlement 7. Enter: products sold by customer, cash collected, returns 8. System creates invoices and updates stock

Price Lists

1. Sales → Price Lists tab
2. View existing price lists (Retail, Wholesale, Distributor, etc.)
3. To update: select price list → edit prices → effective date
4. Changes apply to all customers on that price list

Never change a price list during active van sales — wait until settlement is done.

Track Shipments

1. Go to `/dashboard/logistics?tab=shipments`
2. View all outbound shipments with status
3. Click shipment to see:
 - Products, quantities, driver, vehicle
 - Delivery confirmation status
4. Mark as **Delivered** when customer confirms receipt

Collections (Payments)

Record customer payment:

1. Sales → Collections tab
2. Find the open invoice
3. Click **Record Payment**
4. Select method: M-Pesa, bank transfer, cheque, cash
5. Enter amount and reference
6. Click **Post**

M-Pesa payments can be reconciled automatically (requires integration to be configured).

Returns Management

Customer returns a product:

1. Sales → Returns tab
2. Click + **New Return**
3. Reference original invoice
4. Enter returned products and quantities
5. Reason: expired, damaged, wrong product, etc.
6. Credit note is generated automatically
7. Goods go back to inventory as quarantine (pending QC check)

Common Mistakes

Mistake	How to Avoid
Wrong price on invoice	Check price list assignment for the customer before invoicing
Invoice without KRA PIN	Customer KRA PIN is mandatory for eTIMS — add it to customer master
Van load quantity wrong	Confirm with warehouse at loading time
Payment recorded twice	Check invoice status before recording — "Paid" invoices are closed

Troubleshooting

Problem: Cannot confirm sales order — "Credit limit exceeded"

Solution: Contact credit controller to increase customer credit limit or get advance payment

Problem: Invoice shows wrong tax

Solution: Check customer VAT status and product VAT group; update if incorrect

Problem: Van Sales settlement shows mismatch

Solution: Recount physical returns and cash; check for unentered damages

Training Checklist

- ☐ Can create a sales order from customer request
- ☐ Can check customer credit limit
- ☐ Can generate and post an invoice
- ☐ Can create a van load and record settlement
- ☐ Can record a customer payment
- ☐ Can process a customer return
- ☐ Can view shipment status
- ☐ Can view and update price lists
- ☐ Knows eTIMS requirement (KRA PIN on every invoice)

HR User Manual

Audience: HR Officer, Payroll Clerk

URLs: `/dashboard/hr`, `/dashboard/payroll`

Permission required: `hr.view`, `hr.create`, `payroll_ke.view`

Your Role

You manage employee records, attendance, leave, and payroll. Kenya statutory deductions (PAYE, NHIF, NSSF, Housing Levy) must be calculated and filed correctly.

Pages You Use

Page	URL	What you do there
HR workspace	<code>/dashboard/hr</code>	All HR activities
Kenya Payroll	<code>/dashboard/payroll</code>	Monthly payroll processing

Screenshot

Create an Employee Record

1. Go to `/dashboard/hr?tab=employees`
2. Click **+ New Employee**
3. Fill in:
 - Full name
 - National ID number
 - KRA PIN (required for PAYE)
 - NHIF number
 - NSSF number
 - Date of birth
 - Job title / department
 - Hire date
 - Employment type: Permanent / Contract / Casual
 - Bank account details (for payroll payment)
4. Save

Payroll Profile Setup

For each employee, set up their payroll profile:

1. HR → Payroll tab (or use Payroll workspace directly)

2. Find the employee → **Payroll Profile**

3. Enter:

- Basic salary (KES)
- Housing allowance
- Transport allowance
- Other allowances
- Standard deductions (pension, SACCO)

4. System calculates PAYE, NHIF, NSSF, Housing Levy automatically

5. Verify net pay

6. Save

Run Monthly Payroll

1. Go to `/dashboard/payroll`

2. Click + **New Payroll Run**

3. Select:

- Period: Month / Year
- Employees: All or specific department

4. System calculates:

- Gross pay (basic + allowances)

- PAYE (per KRA tax bands)
- NHIF (per NHIF contribution rates)
- NSSF (6% employee + 6% employer)
- Housing Levy (1.5% employee + 1.5% employer)
- Net pay

5. Review payroll summary

6. Click **Approve Run**

7. Generate payslips (email or PDF)

8. Process payment (bank transfer, M-Pesa)

Attendance Management

Daily attendance tracking:

1. HR → Attendance tab
2. View: Present, Absent, Late, On Leave
3. Mark attendance manually or confirm biometric import
4. Late arrivals: enter actual arrival time

Leave Management

Employee leave application:

1. HR → Leave tab
2. Click + **New Leave Application**
3. Employee, leave type, from date, to date, reason
4. Submit for approval (supervisor approves)
5. After approval: attendance shows "On Leave"

Leave types: Annual, Sick, Maternity, Paternity, Compassionate.

Ensure leave balances are set up in payroll profiles before go-live.

Recruitment

1. HR → Recruitment tab
2. Click + **New Job Posting**
3. Fill in: job title, department, qualifications, closing date
4. Applicants tracked through: Applied → Shortlisted → Interviewed → Offered → Hired

Employee Expenses

Employee submits expense claim:

1. HR → Expenses tab
2. Click + **New Expense**
3. Employee name, date, description, amount, receipt upload
4. Submit for approval
5. Approved expenses paid in next payroll run

Payroll Reports

1. Payroll → Reports tab
2. Available reports:
 - **P9 Form** (annual PAYE return to KRA)
 - **NHIF schedule** (monthly submission to NHIF)
 - **NSSF schedule** (monthly submission to NSSF)
 - **Payroll summary** by department
 - **Payslip export** (PDF or Excel)

Kenya Statutory Deductions Reference

Deduction	Rate	Who pays
PAYE	Progressive per KRA bands	Employee
NHIF	Per income bracket	Employee
NSSF	6% of gross (capped)	Employee + Employer
Housing Levy	1.5% of gross	Employee + Employer

System calculates these automatically based on current rates. Update rates in Payroll Settings when KRA/NHIF/NSSF announce changes.

Common Mistakes

Mistake	How to Avoid
Missing KRA PIN	KRA PIN is mandatory for PAYE — add before running payroll
Wrong bank account	Double-check bank account number before approving payroll payment
Payroll run for wrong period	Check month/year before approving
Leave not deducted from pay	Ensure leave type is configured as "unpaid" if applicable

Troubleshooting

Problem: PAYE calculation seems wrong

Solution: Check KRA tax bands in Payroll Settings — may need update if KRA changed rates

Problem: Employee payslip shows no NHIF deduction

Solution: Check employee payroll profile — NHIF number must be entered

Problem: Cannot approve payroll run — "Pending approvals"

Solution: Check admin approval workflow — payroll runs may need manager sign-off

Training Checklist

- ☐ Can create a complete employee record with statutory numbers
- ☐ Can set up a payroll profile with allowances and deductions
- ☐ Can run and approve a monthly payroll
- ☐ Can generate payslips and email to employees

- ☐ Can generate P9, NHIF schedule, NSSF schedule reports
- ☐ Can process an employee leave application
- ☐ Can record and approve an employee expense claim
- ☐ Understands current PAYE, NHIF, NSSF, and Housing Levy rates

Manager Dashboard User Manual

Audience: Department Heads, Managing Director, Finance Director

URLs: `/dashboard`, `/dashboard/analytics`, `/dashboard/finance`

Permission required: `analytics.view`, `finance.view`, `approvals.view`

Your Role

You monitor business performance, approve large transactions, and use the ERP for strategic decisions. You do not enter data directly — you review, approve, and analyse.

Pages You Use

Page	URL	What you do there
Dashboard	<code>/dashboard</code>	High-level KPI overview
Analytics	<code>/dashboard/analytics</code>	Detailed business intelligence
Finance	<code>/dashboard/finance</code>	P&L, cash flow, bank
Approvals	<code>/dashboard/approvals</code>	Approve POs, expenses, discounts
Production (read)	<code>/dashboard/production?tab=oeo</code>	OEE and production efficiency
HR (read)	<code>/dashboard/hr</code>	Headcount, attendance

Screenshot

Dashboard Overview

The main dashboard shows:

- Today's production output vs plan
- Current stock value
- Open sales orders
- Outstanding receivables
- Cash position
- Pending approvals count

Click any KPI card to drill into the detail page.

Approve Pending Items

Items requiring your approval appear as notifications and in the Approvals queue:

1. Go to `/dashboard/approvals`
2. View pending approvals by type:
 - Purchase Orders above threshold
 - Sales discounts above limit

- Expense claims above limit
 - Payroll runs
3. Click an item to review details
 4. Click **Approve** or **Reject**
 5. If rejecting: enter reason (mandatory)

Finance Overview

1. Go to `/dashboard/finance`
2. Overview tab shows:
 - P&L summary (this month vs last month)
 - Cash and bank balances
 - Receivables and payables
 - Budget vs actual

Bank Reconciliation Status

1. Finance → Bank Reconciliation tab
2. View unreconciled items
3. Finance team handles reconciliation; you review the status
4. Escalate if large unreconciled amounts persist more than 7 days

Analytics — Sales Dashboard

1. Go to `/dashboard/analytics?tab=sales`
2. View:
 - Revenue by customer, product, region
 - Trend vs last month / last year
 - Top 10 customers, top 10 products
 - Sales rep performance

Analytics — Production Dashboard

1. Analytics → Production tab
2. View:
 - OEE trend over time
 - Production output vs plan
 - Downtime hours by reason
 - Waste % by product line

Analytics — Inventory Dashboard

1. Analytics → Inventory tab
2. View:
 - Stock value trend
 - Slow-moving items
 - Items below reorder point
 - Expiry exposure (value at risk)

Custom Reports (Report Builder)

1. Analytics → Report Builder tab
 2. Create a new report:
 - Select data source (sales, inventory, production, etc.)
 - Choose dimensions and metrics
 - Apply filters
 - Save report with a name
 3. Schedule delivery: email PDF every Monday morning
-

Finance — Budget vs Actual

1. Finance → Budget tab
 2. Compare actual spend to budget by department and account
 3. Variance highlighted in red if > 10%
 4. Click on a line to see underlying transactions
-

Finance — M-Pesa Overview

1. Finance → M-Pesa tab
 2. View M-Pesa collections today/this week/this month
 3. Reconciliation status
 4. Unmatched transactions (require manual matching)
-

Common Tasks

Task	How
Approve a PO > KES 500,000	Approvals workspace → PO queue
Check receivables ageing	Finance → Receivables tab
View weekly production summary	Analytics → Production tab
Get top customers this month	Analytics → Sales tab
Review payroll before payout	HR → Payroll → approve run

Training Checklist

- ☐ Can navigate the main dashboard and understand KPI cards
- ☐ Can approve pending POs, expense claims, and discounts
- ☐ Can view P&L and cash position in Finance
- ☐ Can interpret OEE and production output charts
- ☐ Can find and review sales analytics
- ☐ Can run a custom report in Report Builder
- ☐ Can review and respond to approvals from mobile

Common Problems and FAQ

Audience: All Staff

Version: 1.0 (2026-05-18)

Login Problems

Q: I forgot my password.

A: Click **Forgot Password** on the login page. An email will be sent to your registered email address with a reset link. If you do not receive the email within 5 minutes, contact your administrator.

Q: My account says "Inactive".

A: Your account has been deactivated. Contact your administrator to reactivate it.

Q: I entered my password correctly but it says wrong.

A: After 5 failed attempts, the account is temporarily locked. Wait 15 minutes or ask admin to unlock it. Passwords are case-sensitive.

Q: I set up 2FA but lost my authenticator phone.

A: Contact admin immediately. They can disable 2FA for your account so you can log in and set up a new authenticator.

Q: I see "Permission Denied" when I open a page.

A: You need to be assigned the correct role for that module. Contact your administrator and tell them which page you need access to.

Production

Q: I cannot find my production order in the Shop Floor terminal.

A: The order must be released by a supervisor first. Ask your supervisor to release the order from Production → Orders tab.

Q: The system says "Insufficient stock" when I try to release a production order.

A: Check which material is short. Raise a purchase request or check if stock is in an alternate location.

Q: My batch number is not printing.

A: Check that the production order status is "Completed" and batch number has been assigned in the Batch & Lots tab. Check printer connection.

Q: OEE is showing 0% for my line.

A: This usually means no production output was confirmed today. Ensure output is confirmed in the Execution tab.

Inventory / Warehouse

Q: Stock shows negative — how is that possible?

A: A movement was posted when the balance was zero (e.g., issue before receipt). Check the Movements tab for the erroneous entry. Contact admin to reverse the posting.

Q: I cannot find a delivery to receive against.

A: The purchase order must be approved and released by procurement before it appears in Deliveries. Contact procurement.

Q: A batch I received yesterday is not showing in stock.

A: Check if the receipt was confirmed (Procurement → Deliveries → status should be "Received"). If still "Pending", confirm the delivery.

Sales / Invoicing

Q: I cannot create an invoice — the button is greyed out.

A: The sales order must have a confirmed shipment (delivery note) before invoicing. Check logistics.

Q: Customer invoice is not going to eTIMS.

A: The customer must have a valid KRA PIN in their master record. Update the customer KRA PIN and re-post the invoice.

Q: A customer says they paid but it is not showing in the system.

A: Check Collections tab for any unmatched payments. If M-Pesa, check Finance → M-Pesa for unreconciled transactions.

Q: Sales order is showing wrong price.

A: Price comes from the customer's assigned price list. Check Sales → Price Lists. If the list is correct, the customer may be on the wrong price list — update in customer master.

Finance / Payroll

Q: PAYE calculation looks wrong.

A: KRA tax bands may have changed. Check Payroll Settings and compare to KRA website. Contact admin if update is needed.

Q: NHIF deduction is zero.

A: Employee NHIF number may be missing from their payroll profile. Add the NHIF number and recalculate.

Q: Bank reconciliation shows large unreconciled balance.

A: Common causes: payments imported from bank statement not matched to transactions in ERP, or M-Pesa not reconciled. Use Finance → Bank Reconciliation → Unmatched tab to investigate.

Quality Control

Q: I cannot post an inspection — submit button not working.

A: All mandatory parameters must have a test result entered before submission. Check for empty required fields.

Q: CoA is generating with blank test results.

A: The CoA pulls data from the inspection record. Ensure all tests were entered and the inspection was completed (not just saved as draft).

System / Technical

Q: The page is not loading — just spinning.

A: Try refreshing (F5). If still spinning after 30 seconds, check if the server is running. Contact IT.

Q: I see "Application Error" overlay.

A: This is a system error. Take a screenshot and report to IT with the exact page you were on and what you were trying to do.

Q: Everything is slow today.

A: Could be peak usage time or server load. Check with IT if performance is consistently slow for more than 10 minutes.

Q: I exported data to Excel but some columns are missing.

A: Export includes only the currently visible columns. If a column is hidden, click the column settings (gear icon) to show it before exporting.

Contact Support

For issues not covered here:

1. Ask your supervisor first
2. Contact IT / System Administrator: [add contact]
3. Screenshot the error and the page you were on before reporting
4. Include: your username, the time it happened, and what you were trying to do
